10 HAFTE 10 MINUTE 10 BAJE हर रविवार

A war against Dengue, Malaria & Chickungunia

The Dengue Mosquito has white stripes on it. It is also called Tiger Mosquito.

Dear Parents,

Encourage your ward to this activity.

Children have to inspect their houses and also make their neighbours aware about inspecting their houses for any signs of mosquito breeding. Inspection has to be done by using a magnifying glass, checking for mosquito larvae and breeding in stagnant water. Drain the water, do not let it stagnate.

Every Sunday for 10 weeks at 10.00 a.m for 10 minutes each one of us has to clean our house. Look out for fresh water stagnating in and around your house. Throw away this water because the larve of the Aedes Mosquito breeds in fresh water.
